

Driveway Parking App – Developer Specification

Sep 30, 2026 · @Naveed

1. Product overview

The app is a two-sided marketplace: homeowners rent out their unused driveways, and drivers find, book and prepay for the nearest one. The platform keeps 20% of every booking.

Working name: ParkSpace (placeholder — replace with the final brand name).

The problem. In busy areas, drivers circle for a long time looking for a space. Paid car parks are often full, so drivers end up parking far from where they need to be. This adds traffic and wastes time and fuel.

The solution. Many homes have a driveway that sits empty for hours (for example while the owner is at work). The app lets that owner list the driveway with times and a price. A driver opens the app, sees free spaces nearby on a map, books one for as long as needed, pays up front, and parks.

Goals of version 1

- Drivers can find and book a nearby space in under 2 minutes.
- Owners can list a space in under 5 minutes and get paid automatically.
- The platform takes 20% commission on every booking, automatically.
- Every booking, payment, earning and spend is recorded and visible in each user's history.
- Optional paid extras (CCTV, EV charging, etc.) and price negotiation are supported.

Platforms: iOS and Android mobile apps, plus a web admin panel for the platform team. Currency is GBP (£) and the launch market is the UK.

2. User roles

There are three roles. One account can be both a Driver and a Host (switch mode inside the app), so a homeowner who also drives does not need two accounts.

Role	Who they are	Main things they do
Driver (car owner)	Person looking for a parking space	Search, book, pay, negotiate price, mark Parked, End Booking, rate the space, see spending history
Host (space owner)	Homeowner with a driveway or private space	List spaces, set times and prices, offer extras, accept/decline bookings and offers, see earnings, get payouts
Admin (platform team)	Our staff	Approve hosts/spaces, manage users, handle disputes and refunds, set commission, see reports

3. Registration, login and profiles

Every user must register and verify before booking or listing. Hosts need extra checks before their first listing goes live.

Sign-up options: email + password, phone number (SMS one-time code), Google, Apple.

Common fields (all users)

- Full name, email (verified by link), mobile number (verified by SMS code)
- Profile photo (optional)
- Password (hashed; never stored in plain text)
- Accept Terms & Conditions and Privacy Policy (store version + timestamp)

Driver profile — extra fields

- One or more vehicles: registration number (number plate), make, model, colour, size (small / medium / large / van), EV yes/no + connector type
- Saved payment card (handled by the payment provider, see section 8 — the app never stores card numbers)

Host profile — extra fields

- Home address of each space (can differ from personal address)
- Bank account for payouts, collected through the payment provider's onboarding (Stripe Connect or similar)
- Identity verification (photo ID + selfie) through the payment provider or an ID service
- Proof of right to let the space (e.g. confirmation they own or rent the property with permission) — a checkbox declaration in v1, document upload optional

Account features

- Forgot password / reset by email
- Switch between Driver mode and Host mode
- Edit profile, vehicles, payout details
- Delete account (GDPR) — keep financial records as required by law, anonymise the rest
- Account status: Active, Pending verification, Suspended, Deleted

4. Host: listing a parking space

A host can list one or more spaces. Each listing is reviewed by Admin (or auto-approved if checks pass) before it appears in search.

Listing fields

Field	Details
Title	e.g. "Driveway near Station Road"
Address + map pin	Address lookup (postcode search), host drags pin to exact spot; store latitude/longitude
Space type	Driveway, garage, private bay, forecourt
Number of spaces	1 by default; host can list 2+ if the driveway fits more cars
Max vehicle size	Small / medium / large / van; optional max height and width
Photos	Minimum 2 (space + entrance), maximum 10
Access instructions	Shown to the driver only after booking is paid (e.g. "left side of drive, don't block the garage")
Features	Covered, lit at night, gated, level access
Extras (paid add-ons)	CCTV, EV charging, etc. — see section 9
Pricing	Price per hour, and optionally per day, per week, per month
Minimum / maximum stay	e.g. minimum 1 hour, maximum 30 days
Booking mode	Instant book (auto-accept) or Request to book (host approves within a time limit)

Field	Details
Allow offers	Yes / No — whether drivers can negotiate (section 6)
Cancellation policy	Flexible / Moderate / Strict (section 7)

Availability calendar

- Weekly repeating schedule, e.g. Mon–Fri 08:00–18:00.
- One-off blocks: host blocks specific dates/times (e.g. "I need my drive on Saturday").
- Always-available option (24/7).
- The system must prevent double-booking: a time slot that is booked is removed from availability for that space.
- A buffer time between bookings (default 15 minutes, host can change).

Pricing rules

- If a booking is long enough, the cheaper rate applies automatically (e.g. 10 hours at £2/hour = £20, but if the daily rate is £12, charge £12).
- Host can pause a listing at any time (hidden from search; existing bookings stay).
- Listing status: Draft, Pending approval, Live, Paused, Rejected, Removed.

5. Driver: search, booking and prepayment

The driver sees nearby available spaces on a map, picks one, chooses the time and extras, and pays in full before parking.

Search

- Default: spaces near the driver's current GPS location. Driver can also type a destination (address, postcode or place name).
- Driver enters: start date/time, end date/time (or duration), vehicle.
- Results shown on a **map** (price pins) and as a **list**, sorted by distance by default.
- Sort by: distance, price, rating.
- Filters: price range, CCTV, EV charging, covered, gated, instant book, vehicle size, allows offers.
- Only spaces that are Live, fit the vehicle, and are free for the whole chosen time appear.

Space details page

- Photos, title, rating and reviews, distance and walking time to the destination

- Price breakdown for the chosen time
- Extras available with their prices (tick to add)
- Features, max vehicle size, host's first name and rating
- Cancellation policy
- Buttons: **Book now** and, if allowed, **Make an offer**
- Exact address and access instructions are hidden until payment is complete

Booking and payment steps

1. Driver chooses time, vehicle and extras.
2. App shows a price summary: parking cost + extras + service fee (if any) = total.
3. Driver pays with saved card, Apple Pay or Google Pay. Payment is taken **before** parking.
4. Instant book → booking is Confirmed immediately. Request to book → card is authorised (held, not charged) and the host has a time limit (e.g. 30 minutes, or less if the start is soon) to accept. If the host declines or doesn't respond, the hold is released and the driver is notified.
5. On confirmation, driver gets the full address, map navigation link, access instructions and a booking reference.

Extending a booking

- While parked, the driver can extend the end time if the space is free. The extra amount is charged immediately, with the same 20% commission.

6. Price negotiation

Drivers can send a price offer on listings where the host has allowed offers; the host can accept, decline or counter, and an accepted offer turns straight into a payable booking.

How it works

1. On the space page the driver taps **Make an offer**, enters the time, extras and their offered total price, plus an optional short message.
2. The host gets a push notification and sees the offer with the listed price next to it.
3. Host can **Accept**, **Decline** or **Counter-offer** (enter a new price).
4. The driver can accept or decline a counter, or counter again.
5. When either side accepts, the driver has 15 minutes to pay. Payment confirms the booking at the agreed price. If not paid in time, the offer expires.

Rules

- Maximum 3 rounds of counter-offers per negotiation (then it closes).

- Each offer expires after a set time (e.g. 2 hours, or 30 minutes if the start time is within 3 hours). Expired offers close automatically.
- Host can set a **minimum acceptable price** (optional). Offers below it are declined automatically with a polite message.
- The time slot is **not** reserved during negotiation. If someone else books it first, all open offers for that slot close and the drivers are told.
- Only the price is negotiated. Times and extras are fixed once the offer is sent (changing them = new offer).
- The 20% commission applies to the final agreed price.
- Negotiation happens inside the app only (structured offer screen with a short message field). Phone numbers, emails and links in messages are blocked, so deals can't move off the platform.
- All offers and counters are saved in history (who, amount, time, outcome).

7. Booking lifecycle: Parked and End Booking

Every booking moves through fixed statuses; the driver taps **I've Parked** on arrival and **End Booking** on leaving, and each tap is timestamped in history.

Money moves at Confirmed; the host is paid after Completed

booking statuses · 7 states

Instant-book bookings skip Requested and start at Confirmed. Every change of status is saved as a booking event (section 14).

I've Parked

- Button becomes active 15 minutes before the booked start and stays active until the booked end.
- The app records the time and the phone's GPS location. If the driver is more than about 200 m away, show a warning but still allow it.

- Optional: take a photo of the parked car.
- Host gets a notification that the car has arrived.
- If the driver hasn't tapped Parked 30 minutes after the start, send a reminder. The booking stays valid until its end time; a no-show gets no refund.

End Booking

- Driver taps End Booking when the car has left. The app records the time and moves the booking to Completed.
- Ending early gives no automatic refund (the host's time was reserved).
- After ending, the driver is asked to rate the space.

If the driver forgets to end (auto-end and overstay)

- Grace period: 15 minutes after the booked end (admin setting).
- At end + grace, if not ended, the app reminds the driver and asks the host "Is the car still there?".
- Host says the car has gone, or doesn't answer within 1 hour → system auto-ends the booking at the booked end time, no fee.
- Host confirms the car is still there → status Overstay; the driver is charged an overstay fee per extra hour started (default 1.5× the hourly rate) to their saved card, and the host gets 80% of it. Overstay ends when the driver taps End Booking.
- If an overstay blocks the next driver, that driver gets a full refund and help finding another space.

Cancellations

Policy (host chooses)	Full refund	50% refund	No refund
Flexible	Cancelled 1 h or more before start	—	Less than 1 h before start
Moderate	24 h or more before start	1-24 h before start	Less than 1 h before start
Strict	48 h or more before start	24-48 h before start	Less than 24 h before start

- Any driver cancellation within 5 minutes of booking = full refund (mistake protection).
- If the **host** cancels, the driver always gets a full refund; the host gets a warning, and repeated cancellations lead to suspension.

8. Payments, 20% commission and payouts

The driver pays the full amount up front; the platform keeps 20% of the booking total (parking + extras) and the host receives the remaining 80%.

Payment provider: use a marketplace payment service such as **Stripe Connect** (recommended). It handles cards, Apple Pay, Google Pay, host identity checks, bank payouts, splitting money between platform and host, and UK/EU card security rules (SCA/3-D Secure). The app never stores card or bank numbers itself.

Worked example

Item	Amount
Parking: 5 hours × £2.00	£10.00
Extra: CCTV	£1.50
Extra: EV charging	£4.00
Driver pays (booking total)	£15.50
Platform commission (20%)	£3.10
Host earns (80%)	£12.40

The commission rate is a setting in the Admin panel (default 20%), not hard-coded. Store the rate used on each booking, so old bookings keep their original numbers if the rate changes later.

When money moves

1. **Booking paid** → full amount charged to the driver and held by the platform.
2. **Booking completed** (driver taps End Booking, or auto-end) → host's 80% becomes "pending".
3. **After a 24-hour dispute window** with no complaint → host's 80% becomes "available".
4. **Payout** → available balance is sent to the host's bank account automatically on a schedule (e.g. weekly), or on request if above a minimum (e.g. £10).

Refunds

- Refund amount follows the cancellation policy (section 7).
- When a driver is refunded, the commission is refunded in the same proportion (full refund = platform keeps nothing).
- Admin can issue full or partial refunds manually for disputes.

Receipts and records

- Driver gets a receipt (in-app + email) for every payment, extension and refund.
- Host gets an earnings statement per booking and a monthly statement (downloadable PDF/CSV) — useful for their tax returns.
- Every money movement is saved as a transaction record (section 14).

9. Add-on services (extras)

Hosts can offer optional paid extras on each space; drivers tick the ones they want at booking, and extras are added to the total and included in the 20% commission.

Extra	How the host sets it up	How it is priced	Notes for the developer
CCTV surveillance	Tick "CCTV covers this space", add a photo of the camera	Flat fee per booking, or per day	v1: a paid feature badge only. Later: optional live camera link shared with the driver during the booking
EV charging	Charger type (e.g. Type 2, CCS), power in kW, tethered or socket	Flat fee per booking, per hour, or per kWh (host enters a price)	Only show to drivers whose vehicle is marked EV with a matching connector
Covered / garage	Feature, not an extra	Part of the base price	Shown as a filter
Car wash / valet	Tick if offered	Flat fee	Optional; host-provided service
Extra-large space (van)	Tick	Flat fee or higher hourly rate	Linked to max vehicle size

Rules

- The admin can add new extra types from the Admin panel without an app update (store extras as a configurable list, not hard-coded).
- Each extra on a listing has: type, price, price unit (per booking / per hour / per day / per kWh), description, on/off.
- Extras chosen are saved on the booking with the price at the time of booking.
- If a paid extra wasn't provided (e.g. charger broken), the driver can report it and Admin can refund that extra only.

10. History, earnings and spending dashboards

The app keeps a permanent record of every booking, status change and payment for each user, and shows it as simple dashboards.

Driver: My Bookings and Spending

- Tabs: Upcoming, Active (currently parked), Past, Cancelled.
- Each booking shows: space, address, date, booked time, actual Parked time, actual End time, vehicle, extras, amount paid, refunds, receipt.
- Spending summary: total spent this month, this year, all time; number of bookings; filter by date range.
- Download receipts / statement (PDF or CSV).
- Rebook a past space in one tap.

Host: My Listings and Earnings

- Booking tabs: Requests & offers, Upcoming, Active (car parked now), Past, Cancelled.
- Each booking shows: driver first name, vehicle plate, booked time, actual Parked and End times, extras, booking total, commission (20%), host earnings.
- Earnings summary: pending, available, paid out; totals for this month, this year, all time.
- Per-listing stats: number of bookings, occupancy (% of available hours that were booked), average rating, earnings.
- Payout history: date, amount, bank (last 4 digits), status.
- Monthly statements to download (PDF/CSV).

What must be timestamped and stored for every booking

- Booking created, offer sent/accepted (if any), payment taken, host accepted, driver marked Parked, driver marked End, auto-ended (if any), cancelled (if any), refund issued, payout released.
- Store date, time (UTC, shown in local time), and who did it (driver / host / system / admin).
- Records are never hard-deleted; use a status field (soft delete) so history and accounting always add up.

11. Ratings, reviews, disputes and safety

Both sides rate each other after every completed booking, and either side can report a problem, which goes to Admin as a dispute.

Ratings and reviews

- After End Booking, the driver rates the space and host (1–5 stars + optional comment). The host rates the driver (1–5 stars + optional private note).
- Reviews can be left for 14 days after the booking ends.
- Space rating = average of its reviews; shown on listings. Driver rating is visible to hosts on booking requests and offers.
- Users with very low ratings are flagged to Admin.

Reporting a problem (disputes)

- Buttons on the active and past booking: "Space occupied / can't access", "Extra not provided", "Damage", "Driver overstayed", "Wrong vehicle / someone else parked", "Other".
- Each report: type, description, photos (up to 5), timestamp, booking link.
- Report opened within the 24-hour window freezes the host's payout for that booking until Admin decides.
- Admin can: refund the driver (full/partial), charge the driver an overstay fee, release the payout, warn or suspend a user.

Space occupied on arrival

- If the driver reports the space is blocked, the app should offer: contact host in-app, find nearby alternatives, or a full refund. The host gets a warning; repeated cases lead to suspension.

Safety and trust

- In-app chat between driver and host, only for a confirmed booking; blocks phone numbers, emails and links until booking is confirmed, and is saved for disputes.
- Hide exact address until payment.
- Driver's number plate shown to the host for confirmed bookings.
- Photo check-in (optional): driver takes a photo of the parked car when marking Parked — helps with damage disputes.
- Block/report user function.
- Clear terms that the platform is a marketplace and liability rules for damage (to be confirmed with a lawyer and insurer).

12. Notifications

Users get push notifications for every step that needs their attention, with email for receipts and important account events.

Event	Driver	Host	Channel
Booking confirmed / paid	Yes	Yes	Push + email
Booking request (request-to-book)	—	Yes	Push
Request accepted / declined / expired	Yes	—	Push
New offer / counter-offer / offer accepted / expired	Yes	Yes	Push
Reminder: booking starts in 30 min (with directions)	Yes	—	Push
Driver marked Parked	—	Yes	Push
Reminder: booking ends in 15 min (option to extend)	Yes	—	Push
Booking ended (driver or auto)	Yes	Yes	Push
Overstay warning	Yes	Yes	Push + SMS
Cancellation	Yes	Yes	Push + email
Refund issued	Yes	—	Push + email
Payout sent	—	Yes	Push + email
New chat message / new review / dispute update	Yes	Yes	Push
Listing approved / rejected	—	Yes	Push + email

Users can turn off non-essential notifications in settings; booking, payment and safety messages stay on.

13. Admin panel (web)

A web dashboard lets the platform team run the business: approve hosts and spaces, manage bookings and money, resolve disputes and change settings.

- **Dashboard:** today's bookings, active parkings now, revenue (gross booking value, commission earned), new users, open disputes.
- **Users:** search, view profile and full history, verify, suspend, delete; see ratings and reports.
- **Listings:** approval queue (photos, address, declaration), approve/reject with reason, edit, pause, remove.

- **Bookings:** search by reference, plate, user, date; view full timeline of status changes; cancel; force-end; add overstay fee.
- **Payments:** all transactions, refunds (full/partial), payout status, commission report by day/week/month; export CSV.
- **Disputes:** queue with status (Open, In review, Resolved), evidence, chat log, decision and notes.
- **Settings:** commission % (default 20), extras list, cancellation policy rules, grace periods, overstay fee, offer expiry times, minimum payout.
- **Content:** Terms, Privacy Policy, FAQs, push announcements.
- **Admin roles:** Super admin, Support agent (no settings access), Finance (payments only). Every admin action is logged (who, what, when).

14. Data model (main tables)

These are the core database tables; the developer can adjust names and add fields, but every item here must be stored.

Table	Key fields
users	id, name, email, phone, password_hash, photo_url, is_driver, is_host, verification_status, account_status, rating_as_driver, rating_as_host, created_at
vehicles	id, user_id, plate, make, model, colour, size, is_ev, ev_connector
host_payout_accounts	id, user_id, provider_account_id (e.g. Stripe Connect id), payouts_enabled, bank_last4
listings	id, host_id, title, address, postcode, latitude, longitude, space_type, spaces_count, max_vehicle_size, max_height, features, access_instructions, price_hour, price_day, price_week, price_month, min_stay, max_stay, booking_mode (instant/request), allow_offers, min_offer_price, cancellation_policy, status, rating, created_at
listing_photos	id, listing_id, url, order
availability_rules	id, listing_id, day_of_week, start_time, end_time (weekly schedule)

Table	Key fields
availability_blocks	id, listing_id, start_datetime, end_datetime, reason (host block)
extra_types	id, name, description, allowed_price_units, active (admin-managed list)
listing_extras	id, listing_id, extra_type_id, price, price_unit, details (e.g. charger kW), active
offers	id, listing_id, driver_id, vehicle_id, start, end, extras, amount, round, sent_by (driver/host), parent_offer_id, status (open/accepted/declined/countered/expired/paid), expires_at
bookings	id, reference, listing_id, driver_id, host_id, vehicle_id, offer_id (nullable), booked_start, booked_end, actual_parked_at, actual_ended_at, parking_amount, extras_amount, total_amount, commission_rate, commission_amount, host_earnings, overstay_fee, status, cancelled_by, cancel_reason, created_at
booking_extras	id, booking_id, extra_type_id, price, price_unit, quantity, line_total
booking_events	id, booking_id, event (created/paid/accepted/parked/ended/auto_ended/cancelled/extended/refunded), actor (driver/host/system/admin), actor_id, latitude, longitude, created_at
transactions	id, booking_id, user_id, type (charge/refund/commission/host_earning/payout/overstay_fee), amount, currency, provider_ref, status, created_at
payouts	id, host_id, amount, provider_ref, status, sent_at
reviews	id, booking_id, from_user_id, to_user_id, listing_id, stars, comment, created_at
disputes	id, booking_id, opened_by, type, description, photos, status, resolution, refund_amount, admin_id, created_at, resolved_at
messages	id, booking_id, sender_id, text, created_at

Table	Key fields
notifications	id, user_id, type, title, body, read, created_at
settings	key, value (commission_rate = 20, grace periods, fees, expiry times)
admin_audit_log	id, admin_id, action, target, details, created_at

Key point: a user's history, total earned and total spent are calculated from the bookings, booking_events and transactions tables — no separate "balance" number that can drift out of sync.

15. Screens, tech stack and quality requirements

Main screens (mobile app)

1. Welcome / onboarding (3 slides explaining the app)
2. Sign up / log in / verify phone and email
3. Driver home: map + search bar + time picker
4. Search results (map and list views, filters)
5. Space details
6. Booking summary and payment
7. Make offer / negotiation thread
8. Booking confirmed (address, directions, instructions)
9. Active booking: timer, **I've Parked** button, **End Booking** button, Extend, Report problem, Chat
10. My Bookings (Upcoming / Active / Past / Cancelled) and booking detail
11. Spending summary and receipts
12. Host dashboard: requests, offers, today's bookings, earnings summary
13. Add / edit listing (step-by-step form), availability calendar, pricing, extras
14. Earnings, payouts, statements
15. Reviews (leave and view)
16. Profile, vehicles, payout account, settings, notifications, help, delete account

Suggested technology (developer may propose alternatives)

Part	Suggestion
Mobile apps	React Native or Flutter (one codebase for iOS + Android)

Part	Suggestion
Backend API	Node.js (NestJS/Express) or Python (Django/FastAPI)
Database	PostgreSQL with PostGIS (fast "nearest space" searches)
Payments	Stripe Connect (split payments, payouts, host ID checks)
Maps	Google Maps or Mapbox (maps, address/postcode search, directions)
Push notifications	Firebase Cloud Messaging
Email / SMS	SendGrid or similar; Twilio or similar for SMS codes
File storage	AWS S3 or similar (photos)
Scheduled jobs	Queue/cron for auto-end, reminders, offer expiry, payout release
Admin panel	Web app (React) on the same backend
Hosting	AWS, Google Cloud or similar, UK/EU region

Quality requirements

- **No double-booking:** booking a slot must lock it at database level (transaction/row lock), so two drivers can't pay for the same space and time.
- **Speed:** search results in under 2 seconds on 4G.
- **Security:** HTTPS everywhere; passwords hashed; no card data stored; role-based access for admin.
- **Privacy (UK GDPR):** consent for location; data export and deletion on request; privacy policy.
- **Time zones:** store all times in UTC; show local time.
- **Reliability:** daily database backups; error monitoring (e.g. Sentry); logs of all payment webhooks.
- **Accessibility:** readable text sizes, screen-reader labels on main buttons.
- **Store readiness:** meets Apple App Store and Google Play rules.

16. Build phases and acceptance criteria

Build in three phases so a working app reaches real users early; phase 1 is the minimum needed to launch in one area.

1. **Phase 1 — MVP (launch):** registration and verification for both roles; host listing with photos, weekly availability and hourly/daily price; map search; instant book; prepayment with Stripe Connect and automatic 20% split; I've Parked / End Booking with auto-end; cancellations and refunds; driver and host history with earned/spent totals; push notifications; basic admin panel (users, listings approval, bookings, refunds, commission setting).
2. **Phase 2 — Marketplace features:** negotiation (offers and counters); paid extras (CCTV, EV charging); request-to-book; ratings and reviews; in-app chat; disputes module; extensions; overstay fees; statements download.
3. **Phase 3 — Growth:** weekly/monthly bookings, multi-space listings, favourites, promo codes and referral credit, live CCTV link, host smart pricing suggestions, business accounts.

Acceptance tests for Phase 1 (must all pass)

- ☐ A new driver and a new host can each register and verify.
- ☐ Host can list a space; it appears in search only after approval and only in its available hours.
- ☐ Driver near the space finds it on the map, books 2 hours, and pays; the card is charged the correct total.
- ☐ Two drivers trying to book the same slot at the same moment: only one succeeds.
- ☐ Commission recorded as exactly 20% of the total; host earnings = 80%.
- ☐ I've Parked and End Booking record correct timestamps; history shows booked vs actual times.
- ☐ Booking not ended by the driver auto-ends at the end time + grace period.
- ☐ Cancellation refunds follow the policy, and commission is refunded in proportion.
- ☐ Host payout is released after the dispute window and appears in payout history.
- ☐ Driver's total spent and host's total earned match the sum of their transactions.
- ☐ Admin can change commission %; new bookings use it, old bookings keep their original rate.

17. Open questions to confirm before development

These decisions affect the build; the defaults used in this document are shown in brackets.

- ☐ Final app name and brand. [ParkSpace placeholder]
- ☐ Launch city/area and currency. [UK, GBP]
- ☐ Does the 20% commission apply to extras too, or only to parking? [Applies to extras too]
- ☐ Is the 20% taken only from the host, or is there also a driver service fee? [Only 20% from the booking total, no driver fee]
- ☐ Who pays card processing fees — platform (out of its 20%) or host? [Platform]
- ☐ Grace period and overstay fee amounts. [15 min grace, 1.5× hourly rate]
- ☐ Cancellation policy percentages. [As in section 7]
- ☐ Instant book as default for new listings? [Yes]
- ☐ Payout frequency and minimum. [Weekly, £10 minimum]
- ☐ Damage and liability: is an insurance partner needed? [Legal advice before launch]
- ☐ Hosts must confirm they have permission to let the space (landlord, council, mortgage). [Checkbox declaration in v1]
- ☐ Budget and deadline for Phase 1.
